

Holiday Plant Care

How to Grow Beautiful Indoor Plants

POINSETTIA, AMARYLLIS, PAPERWHITE & CHRISTMAS CACTUS

Continue your passion for growing indoors during the holiday season. Our plants offer something a little different and serve as festive décor for your home.

LIGHT

As much light as possible is best. Near a south or west window is ideal. Keep away from cold glass. If color begins to fade, reduce the amount of light given.

TEMPERATURE

Average room temperature is best. Ideal temperature is between 65-72°F. Avoid drafts from windows and heat vents.

WATER

Check plants daily as some tend to dry out easily. Thoroughly water when the soil surface is completely dry. Saturate the soil, but never let the plant sit in excess water. Using filtered or unsoftened water is best.

Paperwhites are unique as bulbs can grow & bloom in shallow water without soil.
